

## DR®TOWABLE BACKHOE

---

### Features

The DR Backhoe is designed to make big digging performance both *portable and affordable!*

### EXCLUSIVE FEATURES OF THE DRTOWABLE BACKHOE

---

### Easy Set Up

The **DR Backhoe** is self-powered and has its own hydraulic power system. Since it's completely self-contained, there's no fussing with 3-point hitch or hydraulic connections. It's ready to go any time you are!

### Unmatched Portability

The DR Towable Backhoe hitches to your pickup truck with a common 2" ball hitch, and is highway towable at up to 45 mph. You can take it off-road with your ATV or Lawn Tractor, allowing you to get to places a tractor couldn't go easily or safely.

### Flexible Design

The DR Backhoe is designed for digging attached to your tow vehicle or free-standing. Working unhitched, for lighter jobs, gives you maximum maneuverability, and means you don't have to tie up your tow vehicle if it's needed for other purposes. For ripping or lifting, you should leave the tow vehicle attached to provide extra anchorage.

### **Unique Stabilizer System**

Wide stance stabilizer system provides maximum holdback to counter digging force and provide solid platform. Unique foot design enables you to reposition the unit, using the bucket, but resists unintentional **◆crawl◆**. Front stabilizer legs have 3 positions for modifying working height. Rear stabilizer feet skid backward easily but resist forwardsliding.

### **High-performance Engine**

The Subaru/Robin engine is among the very best small engines available. It's the first air-cooled engine in the world to use auto-style chain-driven overhead cam technology. Steel cam and gear replace rubber timing belts and plastic gears found in other engines, for longer engine life. Overhead cam design...cast-iron cylinder sleeve **◆**and superior lubrication
